Softalk Collaboration Suite Arrives

The new Softalk Collaboration Suite is a suite of three integrated software products designed to cut the cost of groupware for small and medium-sized businesses.

WorkgroupShare is an alternative to the Outlook collaboration functions of Microsoft Small Business Server and Exchange.

WorkgroupMail is a mail server that not only provides scaleable, secure messaging but also email message archiving, integrated anti-virus and spam protection. Softalk Organiser is a web-based collaboration client that

enables remote workers to access Outlook shared folders.

"Softalk Collaboration Suite enables you to benefit from all the advantages of better team working such as quickly seeing when a colleague is free or finding a customer's contact details, without any of the additional expense of a Microsoft Exchange or Small Business Server solution", said Simon Bates, joint CEO of Softalk. "Small and medium size businesses don't want the complexities of a huge, enterprise level system that has artificial limitations simply so that it can be sold to a different market. Instead we've designed and built a system that specifically meets the needs of small and medium size businesses as well as education, government and voluntary sector organisations."
